

Latvian Automotive Company Prevents Insider Threat with Veriato 360

SIA Latakko is one of leading automotive companies in the Baltic States, maintaining vehicles in perfect condition for more than 20 years. The company sells wholesale and retail tires, wheels, batteries and oils for cars, cargo trucks, agricultural transport, and industrial vehicles. Latakko, which employs 280 industry experts and professionals, also manages service centers for "Pirelli Key Point," "Hankook Masters" and "Mr. Big," the network for cargo trucks, agricultural transport, and other industrial vehicles.

THE CHALLENGE

Preventing Inevitable Problems

While Latakko trusts its employees, it's still important for the company to monitor for insider threats – both malicious and inadvertent. In fact, studies show that 85 percent of employees admit to taking company documents and information they had created, when they leave employment, and more than half of security professionals say insider threats have become more frequent.

Latakko needed a solution to both help prevent insider threats and monitor employee activity. "With insider threats in the international news nearly every

day, we wanted to take whatever steps necessary to prevent these types of issues now rather than have to react to any problems after the fact, which can be extremely expensive," said Rimants Karanausks, CSO, Latakko.

After doing research on its own, and testing several options, the company contacted Data Security Solutions, an IT security specialist with international experience protecting its customers against cyber-criminals and disloyal employees.

SOLUTION

DSS recommended Latakko use Veriato 360. The software tracks online and communications activity, and presents detailed, accurate and actionable data so organizations can investigate and respond immediately to any insider threat. Veriato 360 can also be used to monitor employee productivity. Veriato 360 is deployed on endpoints – including desktop computers and laptops, providing a system of record of all employee activity. Specifically, Veriato 360 enables:

- Video playback, showing the playback of screen activity exactly as it occurred.
- File and document tracking on local, removable and cloud storage, as well as print operations.
- Tracking when files are created, edited, deleted or renamed.
- Keystroke logging, including “hidden” characters and combinations—ensuring visibility into the activity of highly privileged users.
- Email recording, capturing communications activity in traditional email clients as well as many popular webmail services, and a searchable system of record that can be alerted and reported on.

“Veriato was easier and faster to deploy than the other solutions we tried, and included a variety of features others didn’t – all at a responsible price we could work with,” Karanausks said.

Results: No Problem Detected

Fortunately for Latakko, Veriato 360 hasn't detected any suspicious employee behavior, but Karanausks is happy to have the software available just in case.

"Veriato 360 is doing exactly what it says it does, providing us with visibility into the online and communication activity of our employees to help prevent any attacks from the inside," he said.

"We hope we never need to use what the software records, but we'd rather make the investment upfront now to help prevent the loss of our valuable intellectual property from any employees who might be tempted to share it or take it with them when they leave. This is a form of insurance that can be invaluable to any organization."
